

Helping Clients Plan for the Unexpected for Over 40 Years

AltairStrickland has been executing turnarounds, revamps, and process unit upgrades for the refining, petrochemical, chemical, ammonia, and power industries since 1976. As mechanical construction specialists, our core business is focused on fluid catalytic cracking units (FCCUs), delayed coking units (DCUs), and ammonia units.

We help our customers better prepare for the unexpected by specializing in the early planning stages of their projects. We are one of a few mechanical contractors that offers project studies and analyses, lift engineering and rigging studies, and other services — all intended to provide practical advice that has the potential to enhance constructability and reduce risk.

Optimizing Turnarounds with Advanced Engineering

Turnarounds are costly—typically the most significant portion of a plant's yearly maintenance budget —and we implement time- and cost-saving measures wherever possible.

Our in-house engineers play a critical role, facilitating turnkey support and helping to optimize each project's scope for safety, reliability, and effectiveness. By identifying critical path activities, consulting on rigging and lift plans, developing weld strategies, and more, our engineers help navigate complex refinery environments to deliver more effective and less costly projects.

Leveraging Our Team of Experts to Minimize Plant Downtime

Mitigating downtime is essential to both profitability and production. We approach scheduled downtimes with methods that center on a quick pace and high level of intensity—planning projects out well in advance and incorporating detailed estimating and constructability reviews. For unscheduled downtime, we can quickly deploy a team of trained experts to resolve issues quickly.

Driving Project Success with Innovative, Patented Processes

AltairStrickland has earned a reputation for on-the-spot field innovations that have saved plant owners/operators considerable time and money. Fueled by countless hours of field experience, our team prides themselves on their ability to think on their feet and make real-time adjustments critical to a project's success.

We have also patented a range of tools, equipment, and processes that help give us an edge over our competition, such as a center pipe lifting device designed to keep coke drums intact as they are extracted from old units.

Industry-Leading FCCU and Coker Revamps

AltariStrickland is among the country's leading providers of FCCU and coker revamps. We offer end-to-end FCCU revamps starting with extensive preplanning service right through to managing the entire scope of work. We have unmatched expertise in the installation of automated un-heading systems and are an experienced contractor for drum replacements.

PLAN ON TURNAROUNDS > REVAMPS > UPGRADES EXCELLENCE

Leading the Industry with an Unwavering Commitment to Safety

Over the past 40 years, AltairStrickland has been fundamentally committed to fostering a company-wide safety culture. To live up to this commitment, we invest substantial energy and resources into developing and implementing a detailed, continuously evolving Zero Injury Safety Program which speaks to our unwavering commitment to the wellbeing of our customers and employees.
